

Beautiful Boulder Walls

Today many customers desire a more natural look to their landscapes. Boulder walls from Rock-Heads offer this appeal and at the same time are very effective at retaining soils behind such a wall. Boulder walls can be designed and built with a variety of stone sizes and types. Granite boulders are effective when the customer desires the multi-colors and shapes associated with this type of boulder. Limestone boulders can be used when a more linear appearance is desired along with earthy textures and color tones.
